

Tamper-Proof Key Rings™

Solid & Flexible Strength

***Smooth Flush Seal
Unmatched Flexibility***

*Manufactured with the strictest
tolerances to provide you with the
ultimate in strength and durability*

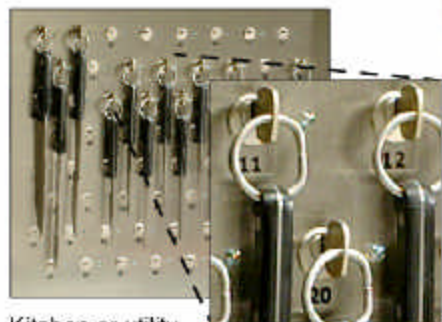

Tamper-Proof Key Rings™

Every ring comes engraved with its own, unique serial number for identification purposes.

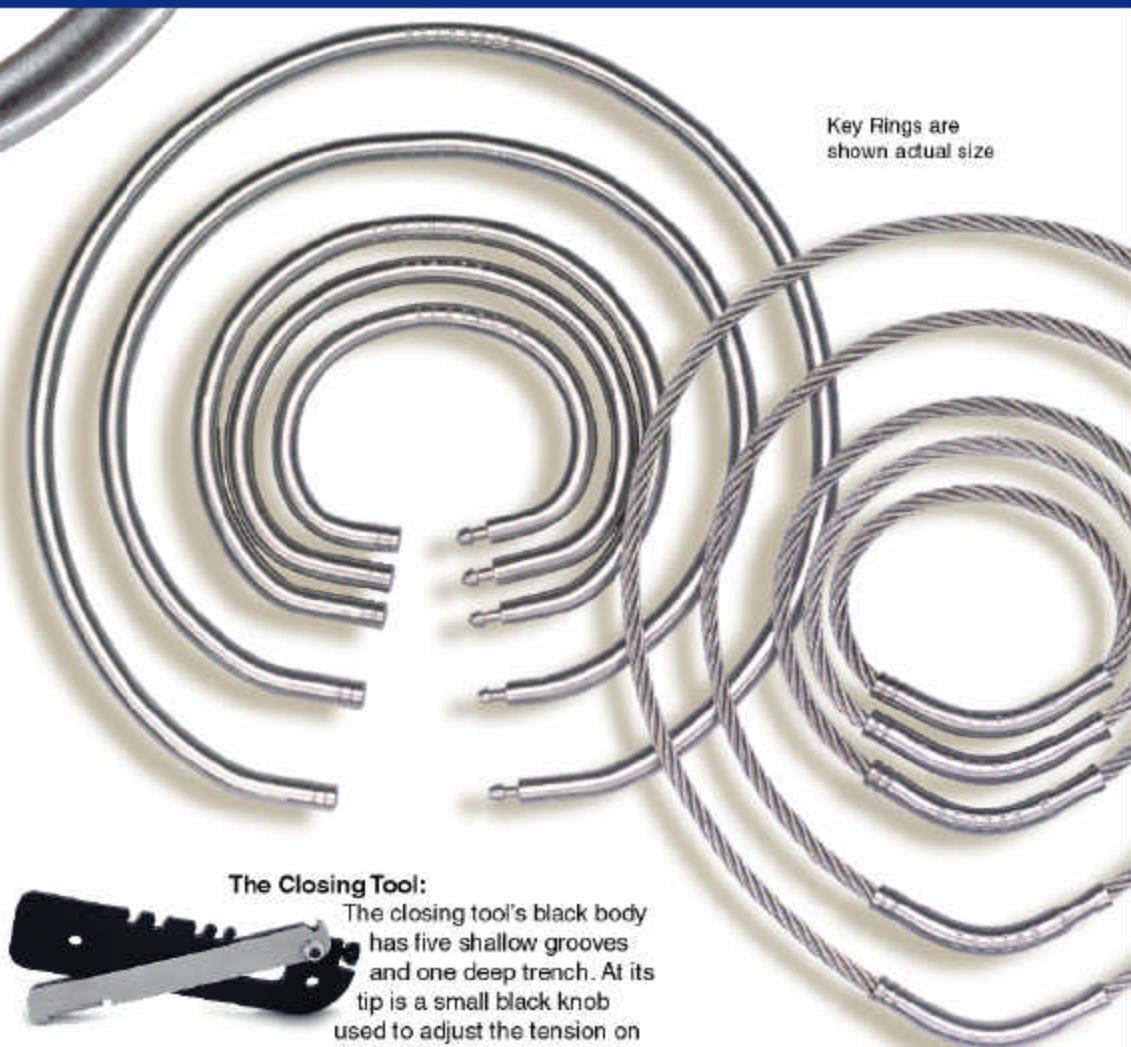

This string of letters and numbers serves as a tracking device for conducting audits on both the rings and their keys. This ID prevents somebody from removing or substituting keys without detection.

Keys aren't the only things you can hang from our Tamper-Proof Key Rings.

Kitchen or utility knives, prison shop tools, small firearms, medical equipment, cash tills or bags; virtually any item of value and/or one whose use needs to be closely monitored can be secured to one of our high-security rings for both portable and fixed security.

Key Rings are shown actual size

The Closing Tool:

The closing tool's black body has five shallow grooves and one deep trench. At its tip is a small black knob used to adjust the tension on the silver swing arm that pulls the ring closed and locks it in place.

The Crimping Tool:

The gold crimper's black handle lifts to reveal three small rollers with rounded ridges that squeeze the connection where the two ends of the ring meet, creating a permanent seal.

The Cutting Tool:

The red cutting tool operates just like the crimper, with the same black handle, except here the three rollers have sharp ridges for cutting through the rings.

Our Tamper-Proof Key Rings, made of solid and braided stainless steel, have male and female ends. You close the one inside the other and use a crimping tool to squeeze and tighten the connection.

Crimping makes the seal smooth and flush with the ring. It's a patented technique that allows you to use the whole ring to flip through your keys without them bumping up against a "raised seal" that does nothing to guarantee the security of your keys.

Color code your Tamper-Proof Key Rings with these small plastic sleeves. Use the five different colors – red, orange, yellow, green and blue – to help you identify your keys and their uses. These tabs slip easily over the rings to provide you with a bright, colorful marker for separating your keys by function, by area, or by user.

Specifications

Tamper-Proof Key Rings®

Material	Stainless Steel
Ring Thickness	4mm
Diameter & Part #	1" (3cm) 279
	1½" (4cm) 278
	2" (5cm) 270
	3" (7cm) 277
	4" (9cm) 272
Sealing Tools & Part #	Closer 271V
	Crimper 271D
	Cutter 271X

Flexible Tamper-Proof Key Rings®

Material	Stranded Steel
Ring Thickness	2.6mm cable 4mm seal
Diameter & Part #	1" (3cm) 279F
	1½" (4cm) 278F
	2" (5cm) 270F
	3" (7cm) 277F
	4" (9cm) 272F
